Montier Photo Festival

✓ Presentation

The Photo Festival Montier, unique international event of wildlife and nature photography, will take place from 19 to 22 November 2020 !

Discussion and reflection at the heart of the image

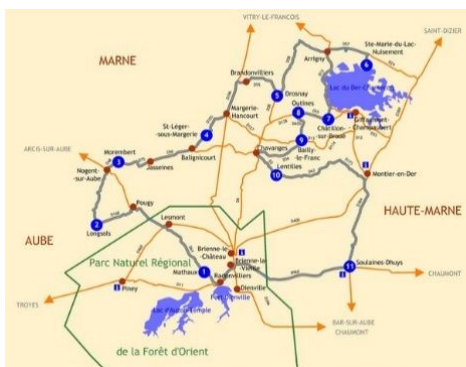

Each year, for 4 days, the best nature photographers offer more than 44,000 visitors 100 original high-quality exhibitions, most of which are previewed (indoor and outdoor), or 2,000 photos spread over 15 sites.

Several themes punctuate the visit of the festival : **macro photography, ethnonature, biodiversity of our regions, landscapes, species monographs, astronomy**. Some exhibitions are directly related to national or international news. The event brings together the greatest photographers and naturalists in the world. Their presence during the four days of the event is a major asset of the festival. In addition to photographic exhibitions, there is a pole devoted entirely to photographic and optical equipment, with sales, presentation and demonstration of the latest innovations in accessories specific to nature photography, a nature library, an associative forum, a research center, photo agencies, travel agencies, specialized press, partners. For 4 days, environmental education holds an important place in Montier, no less than 4,000 children participate, each year, in many workshops and nature outings specially designed for them.

✓ Geographical situation

Montier-en-Der "The Door of Der" is located in Great East Region (Alsace Champagne-Ardenne Lorraine). In "wet Champagne", in the north-west of Haute-Marne department and on the border of the departments Aube and Marne, Montier-en-Der is a place of both economic and tourist development.

In the heart of the Champagne region, Montier-en-Der, a Dervois city founded in 998, is also located near the Lac du Der-Chantecoq, the lake-reservoir Marne : a large artificial lake in Europe with an area of 4,800 ha.

It thus limits the floods in the departments of Haute-Marne, Marne, as well as in the valleys of the Marne and Seine, to Paris. Home to 273 bird species, a rich aquatic fauna and more than 100,000 cranes transiting during migration (November 11, 2014: European record, 200,000 cranes the same day on the lake).
